DECS ORDER  
No. 130, s. 1991

UTILIZATION OF THE TECHNICAL AND VOCATIONAL  
EDUCATION (TVE) MANPOWER PLAN

To: Bureau Directors  
Regional Directors  
Presidents, State Colleges and Universities  
Vocational School Superintendents/Administrators  
Heads of Private Schools, Colleges and Universities

- i. The Bureau of Technical and Vocational Education, recognizing the mismatch of the middle level skills manpower supply with the requirements of the economy and the proliferation of post-secondary non-degree courses developed a Technical and Vocational Education Manpower Plan. This activity is one of the thrusts of the Technical and Vocational Education Project (TVEP) and was formulated in cooperation with the Institute for Labor Studies, a labor policy research arm of the Department of Labor and Employment.
2. The Technical and Vocational Education (TVE) Manpower Plan Executive Summary, copy of which is provided as an inclosure to this DECS Order, covers a six-year (1990-1995) period and has the following objectives:
  - a. Provide an analysis of the current middle level skill manpower situation in the country;
  - b. Define the middle level skill manpower requirements of the economy by industry level and occupation;
  - c. Identify and analyze the current technical and vocational education outputs, namely the technicians, craftsmen and operatives;
  - d. Match middle level skill manpower requirements with technical and vocational education outputs;
  - e. Forecast trends of middle level skill manpower requirements and supply on a five-year period; and
  - f. Recommend policies and schemes to realign training offerings with skills in high demand and to promote the recognition of technical and vocational graduates.

3. Utilization of this plan shall pave the way for the strengthening of existing relevant technical and vocational education programs, development of new course offerings needed especially in priority economic areas and building additional capabilities to respond to the expected manpower requirements in the next six years.

4. Consultation meetings shall be conducted to discuss the utilization of the plan and develop implementation guidelines for the technical and vocational institutions during the quarterly conferences of the fourteen (14) Chiefs of the DECS Regional Technical and Vocational Education Divisions and the annual conferences of the Technical Advisory Committees and the administrators of the technical and vocational education institutions.

5. An annual updating and validation of the planned targets and projections particularly with regard to manpower requirements, training targets, enrollees and graduates, to take into account global and local market developments is imperative.

6. Relevance of existing courses in relation to the real demands of industry, additional budget requirements and budget assistance to operationalize programs and projects among others must be considered in the validation of the Plan.

7. Implementation of selective institutional programs shall be realigned with the BTVE program thrusts to ensure realization of the plan's objectives and in a way ease up widespread unemployment.

8. Prioritization and/or realignment of non-degree post-secondary course offerings, formulation of admission policies and determination of quantitative as well as qualitative developments in the technical and vocational education sub-sector shall be based on said plan.

9. Immediate dissemination of this Order is desired.

(SGD.) ISIDRO D. CARINO  
Secretary

\* VOCATIONAL EDUCATION

Executive Summary  
**TECHNICAL AND VOCATIONAL EDUCATION MANPOWER PLAN**  
(1980-1995)

**A. RATIONALE**

Technical and vocational education as an area of the country's overall manpower and human resource development program has the crucial role of training individuals and providing the middle level skill manpower required by our economy. The emerging problem of the loss or lack of certain identified skills in our labor market is a situation peripheral to the problem of mismatching of jobs and educational outputs. Causes for this condition has considerably been traced to our industrial processes changes, rapid increase in demand and the employees conventional recruitment policies. This condition, therefore, compels the undertaking of the assessment of the performance of technical and vocational education vi-a-vis the demands of the economy. Having chosen productivity as the centerpiece program of the technical and vocational education for the generation of employment and alleviation of poverty through maximized productivity, the technical and vocational education subsector needs to fulfill its mission through two interrelated programs, namely: (a) matching manpower supply with demand; and (b) more effective instructional delivery.

**B. ASSESSMENT OF TECHNICAL AND VOCATIONAL EDUCATION PERFORMANCE**

The three-year technician course turned out its first batch of graduates in SY 1988-1989 with a total of 844 graduates and increased by 9.86 percent in SY 1989-1990. The mechanical technology and related courses got the biggest share of 42.58 percent; 28.93 percent for other engineering related technology courses; 23.51 percent for electrical technology; and 4.98 percent for civil technology.

The two-year craftsman course produced a total of 35,737 graduates in SY 1988-89. Accounting 44.18 percent of these fall under other related technology courses; 20.62 percent for other engineering related technology courses; 14.44 percent for mechanical technology and related courses; 13.08 percent for electrical technology courses; 2.54 percent for civil technology; 2.18 percent for food trades; 2.10 percent for technical drafting; 1.78 percent for garment trades; 0.07 percent for handicrafts; and 0.01 percent for ceramics technology.

The graduates of the one-year operative courses numbered about 46,353 also in SY 1988-1989. Mechanical technology and related courses got the biggest share of 52.88 percent; followed by other related technology courses having a percent share of 23.01 percent; electrical technology is 14.53 percent; 3.14 percent for other engineering related technology courses; and 0.44 percent for technical drafting.

## C. THRUSTS OF TECHNICAL AND VOCATIONAL EDUCATION

TVE aims to contribute towards the attainment of the national goals of raising productivity, generating employment, alleviating poverty and promoting equity and social justice.

### Goals

1. Re-orient training of technicians and tradepersons towards manpower requirements of industry.
2. Expand entrepreneurship training to support small and medium scale export-oriented industries.

### Objectives

1. Development of middle and high level manpower on priority areas.
2. To acquire occupational skills for gainful employment.
3. To inculcate work attitudes/values for efficiency and effectiveness on the job.
4. To develop critical thinking and self-learning skills/establish a coordination scheme for a stronger linkage between the educational system and the industry sector.

### Strategies

1. Fabrication method of training for productivity.
2. Role stratification:

1st Level: The TET as the "Most Likely to Succeed": The Leader Schools in Regional Development Programs.

2nd Level: Technical Schools as Provincial Leader Schools.

3rd Level: Secondary Vocational Schools as Feeder Schools.

### Programs/Projects

#### 1. Matching Manpower Supply with Demand

- a) Manpower requirements approach to planning
- b) Industry-driven courses
- c) Non-traditional products and services
- d) Education Management Information System (EMIS)
- e) Industry-Institution Linkages: the Technical Advisory Committee's
- f) The School-Based Production Centers: Significant Contributors to the Rural Industrialization Strategy

## 2. More Effective Instructional Delivery Systems

- a) Training cum-production of tools, machineries, spare parts and accessories
- b) Competency-Based Vocational Education
- c) Dual Training System
- d) Development/Testing of Prototype Instructional Materials
- e) Teachers' Industry Attachment Program (TIAP)
- f) Entrepreneurship Training Centers (ETCs): The Employment Generators
- g) Technician Competency Skills Test (TCST)
- h) Institutional Accreditation

## D. PROJECTIONS ON TECHNICAL AND VOCATIONAL EDUCATION COURSES

The three-year technician course will continue to gain popularity as exhibited by its high enrolment growth rate of 17.90 percent and a graduate growth rate of 9.86 percent both in SY 1988-1989 to SY 1989-1990. Among the three-year technician courses, graduates for the mechanical technology and related courses got an average share of 42.58 percent; 28.93 percent in other engineering related technology courses. The electrical and civil technology areas contributed average shares of 23.65 percent and 4.82 percent, respectively.

From 1987 to 1989, graduates of craftsmen and operatives courses increased posting an average growth rate of 3.59 percent and is expected to generate constant increases in the number of graduates from 1991 to 1995. Among the specific craftsmen courses, general craftsmen courses and other specific craftsmen courses are likely to have a large turn-out of graduates ranging from 81,074 in SY 1990-1991 to 102,379 in SY 1994-1995 for the former and 103,599 in SY 1990-1991 to 129,078 in SY 1994-1995 for the latter. Graduates in the operative courses is also projected to generate an increasing trend particularly in the industry specific plant/machine operators courses, from 22,036 in SY 1990-1991 to 26,016 in SY 1994-1995. For general plant machine operators the increase is from 6,325 in SY 1990-1991 to 7,956 in SY 1994-1995.

## E. MANPOWER DEMAND PROJECTIONS

### 1. Projected Employment

#### Technicians

Projected employment of technicians will increase from 281,469 in 1991 to 333,420 by the year 1995. The net addition of employment will be 51,931 by the end of 1995 with an average growth rate of 4.40 percent during the five-year period. The industry specific workers will represent the highest average share of 38.61 percent of the total technicians; followed by the draft and design workers with an average share of 23.82 percent; electrical with an average share of 18.55 percent; mechanical is 8.27 percent; civil is 8.10 percent and other engineering related technology courses with an average share of 4.18 percent.

## Craftsmen and Operatives

Employment of craftsmen and operatives is expected to have an increasing trend from 1991 to 1995. In 1991, employment of craftsmen and operatives is projected to reach 3,834,679 and grow to 4,659,852 in 1995. Considerably, industry specific craftsmen posted the biggest average share of employment which is 34.89 percent; followed by general plant/machine operators 29.80 percent; 20.63 percent for general craftsmen; and 14.68 percent for industry specific plant/machine operators.

### **2. Projected Manpower Requirements**

#### Technicians

Projected manpower requirements of technicians for the five-year period will be fluctuating from 16,143 in 1991 to 16,205 in 1995. Industry specific technicians will comprise about 50.86 percent of the total technicians required; followed by draft and design technicians with an average of 23.87 percent; electrical technicians with an average share of 12.27 percent; civil with 7.91 percent; and other engineering related technicians with 2.74 percent; mechanical and other related technicians with 2.35 percent of the total manpower requirements.

#### Craftsmen and Operatives

The employment demand of craftsmen and operatives will increase from 147,143 in 1991 to 192,274 in 1995. However, a fluctuating growth will continue to exist within the five-year period, except in the last four years. Among its major categories, industry specific craftsmen and general plants/machine operators will demand the most with an average shares of 35.34 percent and 30.19 percent, respectively. This is followed by general craftsmen with an average share of 20.91 percent and industry plant/machine operators with 13.58 percent of the total craftsmen and operatives manpower requirements.

In a disaggregated level, construction workers bore the highest manpower demand with an average share of 32.65 percent; stationary engine, material handling and transport equipment operators with an average share of 30.19 percent; other specific plant/machine operators with 10.28 percent; machine fitters with 10.31 percent; electrical fitters with 5.19 percent; plumbers with 3.58 percent; miners with 3.11 percent; other industry specific craftsmen with 2.69 percent; blacksmiths with 1.84 percent; and stone cutters 0.17 percent. Projected manpower requirements of technicians, craftsmen and operatives per region from 1991 to 1995 are shown in Tables 1 to 13.

## **F. TRAINING TARGETS**

#### Technicians

Total training targets for technicians for 1991 will be set at a level of 16,040 decreasing to 14,628 in 1995. Throughout the five-year period, a positive

training target for technicians will be exhibited except for mechanical and related technicians. By type of workers, industry specific technicians will be the major contributor, having an average share of 55.78 percent of the total training targets; followed by draft and design technicians with an average share of 26.10 percent; electrical technicians with 11.17 percent; civil technicians with 3.26 percent; other engineering related technicians with 0.22 percent; and mechanical and other related technicians with negative 1.61 percent. The economy needs a total of 1,521,946 technicians within the next five years. The average annual training target for technicians is estimated at 13,735.

### Craftsmen and Operatives

Total training targets for craftsmen and operatives is at negative levels of 75,458 in 1991 and 75,225 in 1995. However, construction workers posted the highest positive growth of 47,221 training targets in 1991 and 57,481 in 1995. This is followed by the general plant machine operators with 40,534 targets in 1991 and 49,341 in 1995. Training targets for miners is pegged at 4,805 in 1991 and 5,841 in 1995; blacksmiths with 860 in 1991 and 852 in 1995; and stone cutters with 247 in 1991 and 299 in 1995.

## G. ACTION PLAN

Achieving the six-year technical and vocational education and training goal of providing the quantitative and qualitative manpower requirements in terms of technicians, craftsmen and operatives would require the following actions:

- 1) Operationalization and/or strengthening of new and existing programs that are designed to minimize impediments to the efficient and effective operation of the existing technical and vocational education delivery system; and
- 2) Strengthening of programs that would build additional capabilities of relevant technical and vocational education institutions in responding to the expected manpower requirements in the next six years.
