STARLAB PORTABLE PLANETARIUM

The Najja Education Consultancy announces the conduct of the planetarium shows called the **“Starlab Portable Planetarium System”**.

The Starlab is a small, portable version of the permanently installed planetarium. It is an inflatable dome that can accommodate 30-40 students. A novel projector that can show the night sky with very realistic stars, planets, and the moon is found inside this planetarium. This is a product of Learning Technologies, Inc. from Cambridge, Massachusetts, U.S.A.

The Starlab dome aims to help the students rediscover their place in the universe through the day and night time sky and to engage them in a personal sense of wonder and discovery. It includes the following activities:

- a. stargazing at the virtual night sky inside the Starlab dome;
- b. viewing the photo exhibit of deep space objects like the galaxies, nebulas, comets, and supernova; and
- c. watching the multimedia presentation about space exploration, planets of the solar system, birth of a star and many more.

For more information, contact Ms. Aurora C. Gamboa, Program Director, Najja Education Consultancy, 95 Malumanay St., Teachers Village, Diliman, Quezon City with telefax no.: (02) 929-6803 or cellphone no.: 0918-210-2979.
